Current ESG vs. ESG NextGen
The following is a high-level comparison of the current ESG functionality and the expected functionality of ESG NextGen

|	Current ESG	ESG NextGen
User Account Management	• Test then Production Account • Long turnaround time for account creation • Lack of enterprise ICAM solution	• Comprehensive account provisioning workflow • Direct production account creation • Federated ICAM
Package Preparation	• Client-side software installation required • LDownload & install may be blocked by company security policy • No auto-update if FDA changes form(s)	• Web-based step-by-step submission preparation • In-page file upload • File size-based submission workflow • Incorporated Center submission wizards for a seamless user experience
File Submission	• Require digital certificate • No large file submission capability • Lack of transparent submission tracking • No integration w/ other FDA Center portals	• eSignature to replace digital certificate • Improved file upload performance • Unified Submission Portal with status/tracking • API service • Large file submissions greater than 1 TB
Communication	• One-way user notification via acknowledgement	• Secure two-way user communication channel • Broadcast capability • Intelligent chatbot to improve user experience
